SMART PIR SECURITY

Like other Vista PIR Covert cameras the Vista SmartPIR range mimics a Passive Intruder Alarm Sensor offering a number of options to suit the majority of covert surveillance requirements. However, this latest version has evolved to also offer the ability to record alarmed images onto an internal 32 or 64Mb flash memory card.

As a direct result, this camera can function as a stand-alone CCTV system - recording images which can later be played back on a conventional PC. Such a facility means the installer's customer does not necessarily need to invest in a complete CCTV system.

Additionally, as you would expect, the Vista Smart PIR camera offers both a built-in PIR sensor and motion detector which can operate on an AND/OR basis.
